

MICRO ENHANCER+

EVALUATION RESULTS IN AGRICOLA JAMA La Paz, Baja California Sur, Mexico. Season 2021-2022

Product: Saladette Tomatoes
Brand: Seminis
Variety: 8444
Plant Date: July 5th 2021
Trasplant date: Agost 13th 2021
Soil: Sandely

First application, October 5th 2021

4 rows selected 80mts each.

Application process october 5th 2021

Second application and evaluation

October 10th 2021

More vigorous plant

Firmer and more abundant roots.

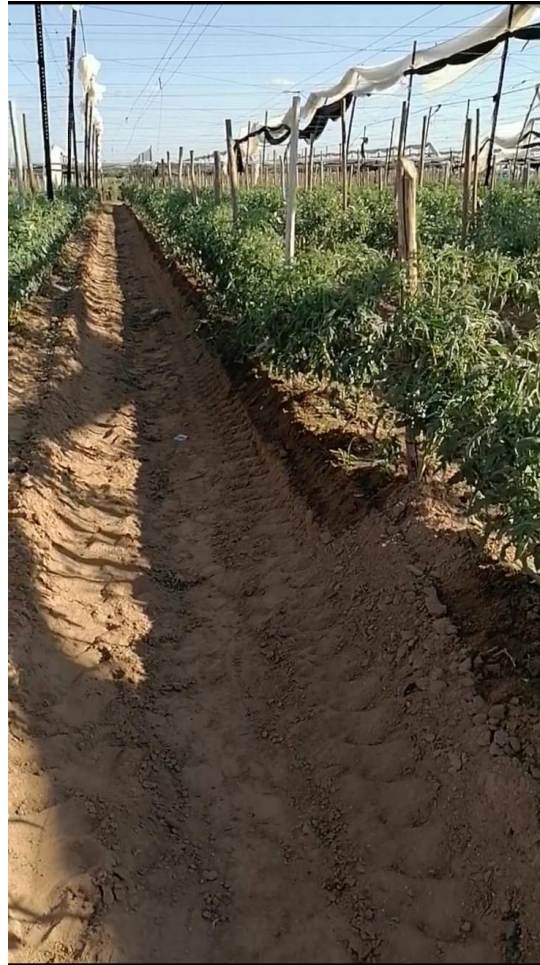

More uniform fruit shape and size

Fruit filling without cavities

Humidity

Greater penetration of moisture and greater penetration of water in the root vulbus, due to the spraying of droplets and the alignment of electrical charges, which allows better assimilation of nutrients with less effort of the plant for the absorption of nutrients.

Fruit filling evaluation October 20th 2021

Evaluation of internal fruit filling.

MICRO ENHANCER+

Witness

These results were obtained under equal conditions of crop management, it was only added on two occasions, on October 05 and 15, respectively, the application of MICRO ENHANCER +, in the selected rows.
