

MICRO ENHANCER+ **BENEFITS**

To Soil:

Micro Enhancer+ boosts the native microbial population.

Microbial respiration creates better tilth and structure.

Each application improves the overall soil condition.

Year after year the soil is rejuvenated and progressively improves.

To Seeds and Roots:

Microbial population at the root / soil interface is greatly increased.

Nutrient conversion and uptake is more rapid and efficient.

Plants get key elements when needed most and release substances into the interface zone.

To Plants:

Plants receive the required nutrients at the right time during their growth phase.

Plants metabolize nutrients more efficiently.

Plants reach full genetic potential to produce high quality, large yielding crops.

Plants become stronger, healthier and carry more mass.

To Crops:

Fruits and Vegetables have higher sugar content and tighter molecular structure.

Quality is maintained during long transport and storage times.

Micro Enhancer+ Investment

Provides better water use and penetration in drought conditions

Reduces the need for many other inputs = cost savings

Produces heavier crops with higher quality and consistency = \$\$\$
